

## ABSTRACT

5 A disk device (10) comprises a case (11) for supporting the entire disk  
device (10), a base chassis (12) on which a spindle motor (21) for rotating the  
disk is set, a counterweight (13) for absorbing vibration of the base chassis  
(12), and a plurality of elastic bodies (14a-14d) for mutually supporting the  
case (11), the base chassis (12) and the counterweight (13). The case (11),  
the base chassis (12), and the counterweight (13) are supported by the  
common elastic bodies (14a-14d). As a result, there can be provided the  
10 dynamic vibration absorber in which the number of parts is not increased  
and a cost can be reduced, and the optical disk device (10) using the  
dynamic vibration absorber.
